

County Life Expectancy in Alabama

from 1985 to 2010

1985

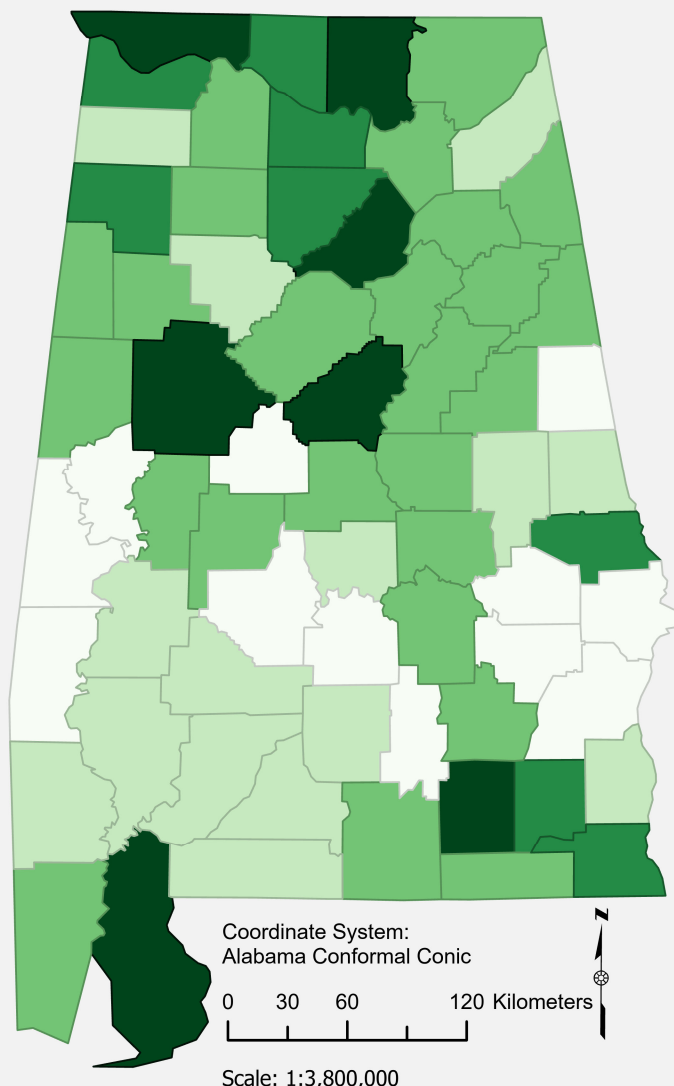

The highest male life expectancy in Alabama at 1985, was lower than in 2010. 12 counties were found to have a life expectancy in the lowest class of 64.75 to 67.34. This was much higher compared to the counties in the lowest category in 2010.

Male Life Expectancy in years

GVF: 0.90

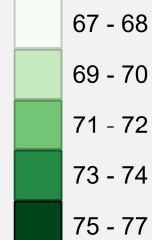

natural breaks classification

2010

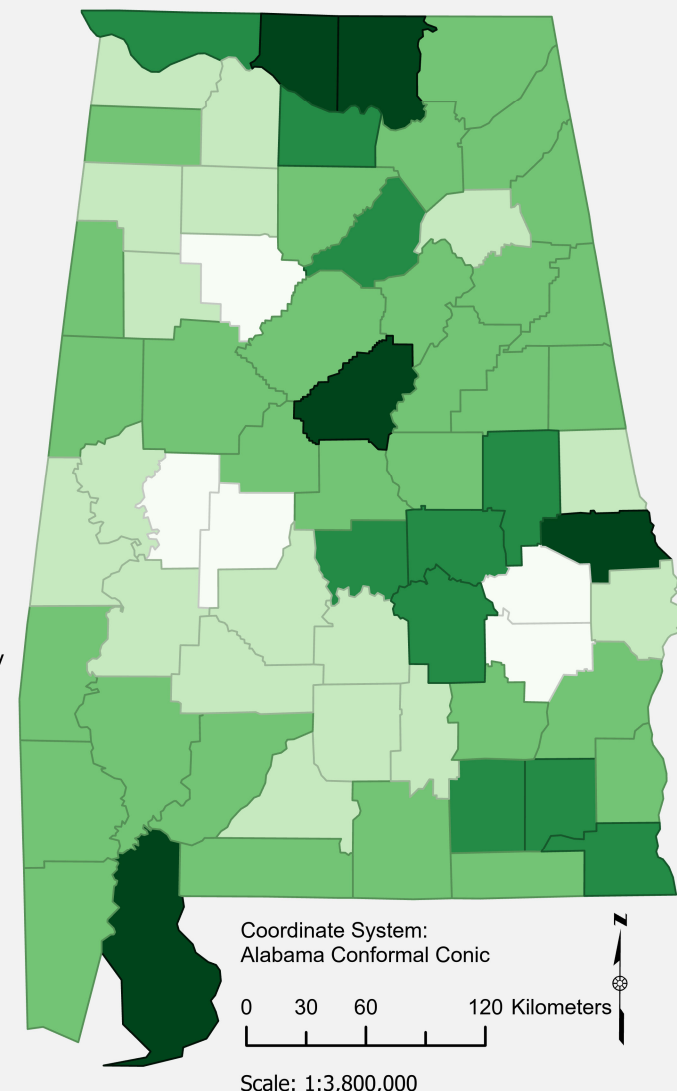

The average life expectancy of a male has increased by two years in 2010 compared to 1985. In 1985, the mean was 69 years old and in 2010 it was 71 years old. However, less and less counties have a life expectancy in the highest class.

Male Life Expectancy in years

Data was compiled from the IHME research, which shows life expectancy by county and sex in the United States during 1985 to 2010. The study of the research is titled: "Left Behind: Widening Disparities for Men and Women in US County Life Expectancy, 1985-2010". From the charts for lowest 15 counties in 2010, it can be seen that some counties have actually worsened in life expectancy.
